AquaSmart GT

Concentrated Wetting and Penetrating Agent.

Gets water down to the root zone, where turf quality is most affected!

THE WATER REPELLENT ZONE

Most common cause of water repellent turf is localized dry spots!

What makes AquaSmart GT so successful is its three-in-one mode of action – it contains an advanced penetrant, a more concentrated spreader plus an advanced re-wetting agent. This combination gives AquaSmart GT the advantage over other products and provides the deep, consistent moisture throughout the root zone that is critical to turf quality.

Available in 2.5, 30 or 55 gallon containers or totes.
