LIGHTNING WARNING SYSTEM

Does Your Golf
Course
Struggle with a
Lightning Policy?

Tired of False
Alarms?

Strike Guard is the Answer!

Order by October 1, 2008

LIGHTNING WARNING SYSTEM

Strike Guard employs state-of-the-art technology to address the most demanding lightning safety and equipment protection applications.

Designed for golf and recreation applications, Strike Guard monitors cloud and cloud-to-ground lightning within a user-set radius and provides contact-closure signaling at user-set lightning activity thresholds. Patented optical signal processing and proprietary optical-coincidence technology prevents false alarms.

Strike Guard Sensor data are communicated via lightning-proof fiber-optic cable to an independent Lightning Data Receiver with system status, caution and alarm indicators, relays, and PC compatible output.

The proven and patented technology in Strike Guard provides significant improvement over first-generation lightning sensors. Strike Guard enables automated initiation of lightning evacuation plans, data back-up, generator activation, and equipment shutdown procedures with utmost confidence.

Order by October 1, 2008

Strike Guard is Affordable!

**System Includes:
1 - Sensor • 1- Transmitter
4 Dual Siren Stations***

**Some facilities may have 4 or more
sirens based on size of facility**

\$14,800⁰⁰

* Some installation necessary for Sensors and Sirens.

**LET STRIKE GUARD TAKE THE
GUESSWORK OUT OF YOUR HANDS**

- Fully automatic alarm triggering with user-set range categories
- 20-mile detection radius
- No false alarms! Patented technology
- Sensor and communication self-test
- Sensor is battery-powered for easy installation
- Durable fiber-optic communication with connector-less technology
- Lightning-proof data communication
- NEMA 4X Sensor enclosure
- Lightning Data Receiver with battery back-up
- Optional Strike View, Windows®-based display software
- Strike Guard Simulation Software for training and testing

No False Alarms

STRIKE VIEW SOFTWARE

The Strike View Software connects to the Strike Guard Data Receiver to provide PC based lightning data displays, alarming and data logging.

Strike View provides information to assist the user to categorize lightning data, analyze storm progression, and determine time to resume operations. Strike View expands upon the information presented with the Lightning Data Receiver.

THE STRIKE VIEW SOFTWARE** OFFERS:

- Lightning counts in 3 categories: Caution (<20 miles), Warning (<10 miles), and Alarm (<5 miles)
- User-set audible and visual alarms
- System state indicators
- Lightning data logging
- Lightning data histogram
- Countdown to "No Lightning Detected"
- Lightning-proof fiber-optic link between Lightning Data Receiver and PC

** Ask your Century sales rep. for computer requirements and other specifications.
